

TryEngineering Inspires the Engineers of Tomorrow

TryEngineering.org aims to empower educators to foster the next generation of engineers and technology innovators. The site provides educators and students with pre-university resources that engage and inspire.

Learn how engineers make a difference

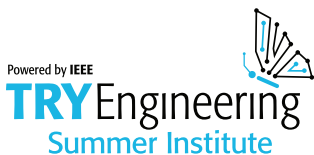

Play online games and challenges

Search for accredited engineering programs

Find resources for competitions and summer camps

The **TryEngineering Summer Institute** is an exciting two-week, on-campus engineering summer camp for high school students held at three premier universities across the United States. The Institute sparks enthusiasm in engineering and technology in the next generation of problem-solvers and difference-makers, and positions these innovators for long-term success in academics and in life. **Give us two weeks, and we'll give you a new definition of what it means to be an engineer.**

TryEngineering Together is a STEM e-learning experience that partners grades 3-5 students with e-mentors (volunteer STEM professionals and enthusiasts) excited to share their love of STEM. Mentors correspond with a student for an academic year sharing ideas, experiences and thought-provoking questions about STEM articles they read together and engineering challenges completed by students in the classroom.

For more information on these programs visit tryengineering.org or email tryengineering@ieee.org
