Lesson Plan:

Cracking the Code

The Design Challenge

The Design Challenge

You are a team of engineers given the challenge to identify problems associated with the current barcode system and propose a new system or product to improve the current barcode system.

Material

Materials – Required

- Barcodes from five different products
- Access to Internet
- Paper

Consider...

- Before you get started building, consider three shortcomings of the current barcode system (for example, sometimes the barcode is scratched and the computer can't pick it up, or sometimes the check-out person has to run it across two or three times before the computer picks it up).

Reflect & Debrief

Reflection

- How do you think technology, and the introduction of barcodes have impacted the day to day life of check-out personnel at grocery stores? What's easier? What's harder?
- Barcodes on medicine bottles or tubes help alert people to side effects and guidelines for taking their medication. How do you think this impacts society?
- What ethical considerations would engineers discuss about barcoding blood donations?
- What computer errors could negatively impact society through the barcode system? Give examples?

Reflection

- How could a computer or software engineer help prevent errors in the barcode system?
- What other applications can you think of where engineers could develop equipment to embed important information? More ethical implications?

Engineering Design Process

The Engineering Design Process

Learn about the engineering design process (EDP). The process engineers use to solve problems.
(Video 1:47)

Engineering Design Process

- Divide into teams
- Review the challenge and criteria & constraints
- Brainstorm possible solutions (sketch while you brainstorm!)
- Choose best solution and build a prototype
- Test then redesign until solution is optimized
- Reflect as a team and debrief as a class

Productive Failure

- The engineering design process involves productive failure: test, fail, redesign. Iterate again and again until you have the best possible solution.
- It is important to document iterations to keep track of each redesign. Use the engineering notebook to sketch ideas, document iterations and any measurement and/or calculations.
- It's also important to showcase the fact that there can be multiple solutions to the same problem. There's no one "right" solution.

Vocabulary

Vocabulary

- Barcode Reader: Optical scanner that can read barcodes
- Constraints: Limitations with material, time, size of team, etc.
- Criteria: Conditions that the design must satisfy like its overall size, etc.
- Engineers: Inventors and problem-solvers of the world. Twenty-five major specialties are recognized in engineering ([see infographic](#)).
- Engineering Design Process: Process engineers use to solve problems.
- Engineering Habits of Mind (EHM): Six unique ways that engineers think.
- Iteration: Test & redesign is one iteration. Repeat (multiple iterations).
- Prototype: A working model of the solution to be tested.
- UPC: Stands for Universal Product Code, which is a barcode

Dig Deeper into the Topic

Writing Activity

- Younger Students: Write an essay or a paragraph describing whether or not you think there were more errors in charging for items at a grocery store before or after the implementation of the computer scanned barcode system.
- Older Students: Write an essay or a paragraph describing how running a grocery store would be different if there were no barcodes? Explain what it might have been like to conduct an inventory listing in 1960. How has computer engineering changed the shopping experience?

Engineering Fields

What is Engineering?

Learn about engineering and how engineers are creative problem solvers and innovators who work to make the world a better place.

How will **YOU** change the world?

Engineering Habits of Mind

Engineering Habits of Mind (EHM) is about how engineers think everyday. The Core Engineering Mind is about making things that work and making them work better.

Engineering Habits of Mind Checklist

- ❑ Systems thinking
- ❑ Problem-finding
- ❑ Visualising
- ❑ Improving
- ❑ Creative problem-solving
- ❑ Adapting

Learning Habits of Mind Checklist

- ❑ Open-mindedness
- ❑ Resilience
- ❑ Resourcefulness
- ❑ Collaboration
- ❑ Reflection
- ❑ Ethical Consideration
- ❑ Curiosity

Greatest Engineering Achievements of the 20th Century

Greatest Engineering Achievements OF THE 20TH CENTURY

Welcome!

How many of the 20th century's greatest engineering achievements will you use today? A car? Computer? Telephone? Explore our list of the top 20 achievements and learn how engineering shaped a century and changed the world.

1. Electrification
2. Automobile
3. Airplane
4. Water Supply and Distribution
5. Electronics
6. Radio and Television
7. Agricultural Mechanization
8. Computers
9. Telephone
10. Air Conditioning and Refrigeration

11. Highways
12. Spacecraft
13. Internet
14. Imaging
15. Household Appliances
16. Health Technologies
17. Petroleum and Petrochemical Technologies
18. Laser and Fiber Optics
19. Nuclear Technologies
20. High-performance Materials

Learn more about how engineers make the world a better place

The banner features the NAE logo (three interlocking puzzle pieces in blue, green, and yellow) and the text "NAE GRAND CHALLENGES FOR ENGINEERING" and "NATIONAL ACADEMY OF ENGINEERING". Navigation buttons for "Challenges", "News", and "Community" are in green. The main visual is a large green puzzle piece on the left with a fusion symbol, and a network of glowing green lines radiating from a central point on the right. Below the puzzle piece, the text "Provide energy from fusion" is displayed, followed by a paragraph about scaling up fusion technology. A row of twelve diamond-shaped icons at the bottom represents various engineering fields: a smartphone, VR, a lightbulb, a bridge, a water drop, a nuclear symbol, a CO2 canister, a microscope, a brain, a laptop, a padlock, a gear, and a circular arrow.

Provide energy from fusion

Human-engineered fusion has been demonstrated on a small scale. The challenge is to scale up the process to commercial proportions, in an efficient, economical, and environmentally benign way.
